THE BEST LAID SCHEMES O' MICE AND MEN: EXPLORING THE INTERPLAY BETWEEN CONTEXT, ROLE AND FRAME IN PROCESS DRAMA

By Pamela Bowell (United Kingdom) and Brian Heap (Jamaica)

Abstract

In this article, the authors extend their investigation into planning process drama (some of which is published in the IDEA Journal Volume 2, 2001) by exploring further the relationship between context, role and frame. They recognise that the interplay between these planning principles provides the teacher with the means by which multiple dramatic circumstances may be created to explore a theme. By using a practical example, the authors illustrate how a vast number of different situations can be opened up in a drama to refocus the learning through new combinations of context, role and frame. By applying these new combinations as the drama unfolds, the teacher and pupils can develop a rich variety of fictional circumstances to explore the theme from a broad range of perspectives. Whilst the other essential elements of planning — theme, sign and strategies — remain vital in creating successful process drama, the authors conclude that interplay between context, role and frame remains its essential creative and empowering heart.

Dans cet article, les auteurs poursuivent leur enquête sur la planification du théâtre de processus (une partie de laquelle est publiée dans IDEA Journal Volume 2, 2001), en analysant plus encore la relation entre le contexte, le rôle et le cadre. Ils reconnaissent que l'interaction entre ces principes de planification fournissent à l'enseignant les moyens au travers desquels plusieurs circonstances dramatiques peuvent être créées pour explorer un thème. En utilisant un exemple pratique, les auteurs démontrent comment un grand nombre de situations différentes peuvent être proposées dans une pièce pour recentrer l'enseignement au travers de nouvelles combinaisons de contexte, rôle et cadre. Par l’application de ces nouvelles combinaisons pendant que la pièce de théâtre se déroule, l'enseignant et les étudiants peuvent développer une variété riche de circonstances fictives pour explorer le thème à partir de multiples points de vue. Pendant que les autres éléments essentiels de la planification — le thème, le signe et les stratégies — restent vitaux pour la création d’un théâtre de processus réussi, les auteurs arrivent à la conclusion que l’interaction entre le contexte, le rôle et le cadre restent le cœur créatif et puissant de ce théâtre.

En este artículo, los autores expanden su investigación hacia la planificación del proceso teatral (parte del cual ha sido publicado en IDEA Journal Volume 2, 2001) explorando más allá la relación entre contexto, actuación y dirección. Ellos reconocen que la interacción entre estos principios de planificación suministra al educador las herramientas con las cuales una multiplicidad de circunstancias dramáticas puede ser creadas para explorar un argumento. Utilizando un ejemplo práctico, los autores ilustran como un gran número de situaciones diferentes pueden ser manifestadas en una representación tetral para reenfocar el aprendizaje a través de nuevas combinaciones de contexto, actuación y dirección. Con la aplicación de estas nuevas combinaciones, y a medida de que el drama se revela, el educador y los alumnos pueden desarrollar una gran variedad de circunstancias de ficción para así explorar el argumento con mayores perspectivas. Mientras que los otros elementos esenciales de la planificación — argumento, símbolo y estrategias — siguen siendo vitales para crear un proceso teatral exitoso, los autores llegan a la conclusión de que la interacción entre el contexto, actuación y dirección perdura como su núcleo causante esencial y creativo.

Authors’ biographies
Pamela Bowell is Principal Lecturer in Drama Education in the School of Education, Kingston University, United Kingdom, where she is Head of Drama and Performing Arts. She has long experience as a drama teacher, advisory teacher, theatre-in-education performer and teacher educator. For many years she was Chair of National Drama and has been an executive member of international drama in education organisations. She has worked extensively internationally. With Brian Heap, she is the co-author of *Planning Process Drama* and a range of articles. Their current research extends their work on planning and is focused on mapping the practice of process drama.

Brian Heap is Staff Tutor in Drama at the Philip Sherlock Centre for the Creative Arts, University of the West Indies, Kingston, Jamaica. He is a lecturer, actor and director and has worked extensively with students and serving teachers in the Caribbean and the United States. Most recently, he has worked as a consultant to Save the Children, using process drama to deliver the HIV/AIDS curriculum to schools and colleges in Zambia, and has coordinated the development of drama curricula for the Ministry of Education in Jamaica. He and Pamela Bowell are currently working on research that extends their previous collaboration.
THE BEST LAID SCHEMES O’ MICE AND MEN: EXPLORING THE INTERPLAY BETWEEN CONTEXT, ROLE AND FRAME IN PROCESS DRAMA

[Editor: There are unrecoverable typographical errors in this article and the tables owing to platform transcription issues. We apologise for these.]

Introduction

It is our experience that increasing numbers of teachers are becoming interested in using process drama in their classrooms. They recognise that this genre of applied theatre provides vivid, challenging and engaging learning experiences for their pupils of all ages, and from our point of view this is a heartening state of affairs.

However, while recognition is one thing, transforming it into action is another, and we feel that this 'slip 'twixt cup and lip' is created not least by a continuing uncertainty and accompanying insecurity that many teachers - particularly non-specialists - feel about how to plan successfully for process drama.

Getting to the bottom of this planning process and attempting to make it accessible to those who are just beginning to use process drama has been, and remains, a continuing area of inquiry for us. At the heart of this process are six principles of planning: theme, context, role, frame, sign and strategies (Bowell and Heap, 2001: 10) and the relationship between them. Whilst it is clear to us that all of these principles need to be applied in order that successful process dramas may emerge, we are becoming increasingly persuaded that three of the principles - context, role and frame - have a particular and vital interconnection. This is leading us to explore this interplay in greater detail.

Because drama contextualises learning in fictional circumstances, it is important to understand that teachers need to be able to plan these circumstances and to recognise that multiple dramatic contexts are available in which to explore the chosen theme or learning area. Recognising that there exists a multiplicity of dramatic contexts in relation to a particular learning area provides us with the means by which a topic can be approached from a range of perspectives. Depending on the chosen context, a whole range of roles is available - not only for the pupils but also the teacher in role. These roles, however, are not enough by themselves. Dramatic tension (and protection into the experience) needs to be generated through frame.

So context, role and frame in combination, as illustrated in Figure 1, give us the where, when, who and why of the drama.
Figure 1: The key combination of context, role and frame

It is perhaps valuable to dwell individually on each of these three key elements before turning to the interaction between them.

**Context**

‘Context’, as a term, can be rather complicated in drama because the same word is applied to a range of equally important but at the same time different kinds of circumstances. However, the focus of this article means that we are concerned with just one of these sorts of context - the dramatic context. The dramatic context refers to the fictional circumstances that will be established by the process drama so that the participants may engage with the learning area in a meaningful way.

Choosing the most appropriate dramatic context is a key skill for the teacher if he or she is going to be able to translate the concept of the theme into a concrete situation in which learning can take place. A tight, specifically identified learning area will help in selecting the place, time and event which, together, will constitute the dramatic context. The dilemma - but also what we regard as the strength - of this choice springs from the understanding that, almost always, there is a diverse range of contexts in which the theme could be explored and from the recognition that it is **possible to move between different contexts as the process drama unfolds.** In due course, when we turn to the interplay between context, role and frame, we will return to a further discussion of this choice.

**Role**

The taking of a role is the core activity in drama, and through the process of enactment within the dramatic context we have the opportunity to behave as if we were someone else and to explore the situation of the drama from another's point of view. When planning for process drama, there are two considerations for the teacher to remember. The one that springs most readily to mind is the roles to be played by the participants - who the pupils are going to be in the drama. However, one of the distinctive aspects of this role will be in the drama. In making these decisions, the teacher needs to ensure that these people, the pupil roles and teacher-in-role, would be found in the time and place of the fictional context and would have a 'real' reason for engaging with the circumstances of the drama. Fortunately, through identifying an appropriate dramatic context, appropriate roles will begin to emerge naturally from within and around it; thus this task becomes less daunting than it might initially seem.
Frame

However, context and roles alone are not in themselves sufficient to establish the dramatic situation. Without dramatic tension to fuel the drama, there is no ‘imperative for active participation’ (Bowell and Heap, 2001: 58). Frame ensures that this imperative is created, and it is the planning principle that we have long felt to be the most important of all. Through the creation of a ‘collective concern’, frame provides the roles with a point of view about the unfolding circumstances of the drama and, in consequence, something to say about it - crucial when we remember that the currency of process drama is talk.

Moreover, there is a second function of frame in process drama. It is melded with context and role and is as important as the tension/communication function. This function of frame is concerned with protecting the participants into the experience of the drama through distancing. By the sensitive employment of frames that allow for distance through time and/or emotional relationship, the teacher is able to provide circumstances within the fictional context that will allow the participants to approach the central learning theme from a ‘cooler’ perspective. This is especially necessary if, as is often the case in process drama, the theme under exploration is a long way from the pupils' own real-life experiences or is emotionally challenging. So, from this set of three planning elements for process drama, there springs a wide range of variables which allow for a great deal of flexibility on the part of the teacher and pupils together as they create the drama.

Why do we think that recognising this relationship is so critical? We believe the interplay between these three principles constitutes the ‘essence’ of process drama. Teachers may very well be tempted into believing that it is having a broad range of dramatic strategies at one’s disposal that truly represents the ‘essence’ of the drama. This belief frequently manifests itself as an earnest attempt by teachers to become familiar with as much of the canon of available drama strategies as they can, while at the same time paying insufficient attention to other equally important aspects of the dramatic structure. Drama strategies need to be seen for what they are, which is really the means by which the substance of the drama is given shape and form. But if the critical interplay between context, role and frame is not fully appreciated and achieved, then the strategies - no matter how well chosen and executed they may be - can be rendered largely ineffective.

Out of the interplay between context, role and frame, roles emerge naturally from a particular dramatic context and get their active potential from the point of view provided by the frame, which also ensures that participants are protected into the experience through the distancing.

This relationship, illustrated in Table 1, provides an example of how context, role and frame can generate a range of different dramatic circumstances in which to explore the theme of the drama - in this case, the Vikings (adapted from Bowell & Heap 2001: 38)

**COOL**
Since, as we have outlined above, multiple dramatic contexts are available to explore a particular theme, it is the actual choosing of the particular set of fictional circumstances that presents the teacher with a major challenge. The fundamental nature of this dilemma lies in having to swiftly envisage a broad range of human experience in order to choose from it the particular set of fictional circumstances or dramatic contexts that will best serve the particular learning for that particular set of learners at that particular moment. The teacher is further challenged to realise that frequently, as the drama unfolds, shifts in the particulars of the learning will demand shifts in the fictional circumstances in order to refocus the learners.

It is through this 'spectrum of circumstance' (Bowell and Heap, 2002: 80) that the drama can progress by making shifts in one, two or all three of these principles. Such adjustments will produce new situations, in addition to developing the potential for completely different sets of learning outcomes.

In defining the 'spectrum of circumstance', we are specifically referring to the vast number of different situations that can be opened up in the drama to refocus the learning through new combinations of context, role and frame, and this represents the main focus of this article.

Previously in our work together, when we have outlined an approach to planning process drama, we have illustrated our point with accounts of fully developed drama classes and experiences that could only have been written after the fact. In reality, of course, because of the essentially improvisatory nature of this genre, planning for process drama in its first phase will hardly take the teacher beyond the initial premise for the drama, even in situations where the final outcome of the drama has already been agreed on. The main body of the drama - the 'play', if you will - has yet to be generated. It will be created, 'written', discovered, negotiated in what Suzanne Langer (1953: 307) powerfully described as the 'perpetual present moment' which is 'filled with its own future'. However, adjusting the action of the drama through improvisation involves more than merely adjusting the strategies being used, since it is the interplay between context, role and frame unfolding in 'now time' which establishes the immediacy of thinking, feeling and action - the experience that 'This is happening to us, here and now, because...'

Part of the power of process drama for pupils lies in precisely this immediacy of thinking and feeling and action which takes place in the present moment. Termed 'now time' by Dorothy Heathcote (Johnson and O'Neill, 1984: 162), it places the participants firmly in the timeframe and experience of the 'story' of the drama. In real circumstances, we can never relive the past nor experience the future - yet we can refer to them in language and even go so far as to speculate as to what might have been or what might still be. The 'now time' of the drama is an enormously powerful feature, because it holds within it the potential to release us in that 'now' to explore dramatically a range of experience including a 'spectrum of whens'; a spectrum of wheres'; a spectrum of whats'; a spectrum of whos'; and 'a spectrum of whys'. In combination, they create a 'spectrum of circumstance' - all happening in the present moment.

Let us take a look at what these findings might mean in practical terms to a teacher in the classroom by developing an example of process drama, which uses as its inspiration a short story by the Brothers Grimm, 'The Old Man and His Grandson':

There was once a very old man, whose eyes had become dimmed, his ears dull of hearing, his knees trembled, and when he sat at the table to eat he could barely hold the spoon to his lips, spilling broth upon the tablecloth or letting it dribble from his mouth. His son and his son's wife were both revolted by this and finally banished the grandfather to sit in a corner where they gave him his food in an earthenware bowl. He used to look longingly towards the table with his eyes brimming with tears. Once, his trembling hands could not hold his bowl and it dropped to the ground, breaking and spilling its contents. His young daughter-in-law scolded him dreadfully but he said nothing and only sighed. The following day she bought him a wooden bowl from which he had to eat.

However, one day they were sitting thus when the little grandson began to gather together some bits of wood. 'What are you doing?' asked the father. 'I am making a little trough,' answered the child, 'for you and mother to eat out of when I am big.'

The man and his wife looked at each other and began to cry. Then they took the old grandfather to the table and, from that day on, always let him eat with them and said nothing if he spilled a little of anything.

In developing a drama experience for pupils from this story, the teacher may very well decide to do the
following. Let us suppose the following:

- The teacher takes on the role of a nosy neighbour, along with the pupils in similar 'neighbourly' roles.
- The context is that they have just overheard their neighbour - the old man - weeping, and his daughter-in-law scolding him.
- The frame is the dilemma they face.
- Is some kind of abuse taking place?
- Should the neighbours mind their own business?
- Should they, as responsible citizens, report the incident to the police?
- Would calling in a social worker be better?
- What would be the most appropriate action to take?
- From this initial premise, the strategies used can be introduced and altered - for example, a neighbourhood committee meeting, telephone conversations with the police, writing in role to a social worker, the newspapers etc.

However, in developing the drama, all the above can be changed - and consequently the learning outcomes altered:

- To begin with, the roles can change. The teacher's role can be changed to that of police officer, the daughter-in-law from the story, a social worker, newspaper reporter, etc. as required. The pupils, too, could take on the roles of police, social workers, construction workers in the neighbourhood, telephone repair workers, etc.
- The context could be altered. Remembering that context includes the elements of time, place and event, it might very well shift to 'making a report at a police station', 'working on a possible story at a newspaper office', 'a discussion at the village meeting hall', etc.
- The frame might be adjusted as pupils and/or teacher adopt different points of view and are distanced in a different manner:
  - The police may be thinking along the lines of, 'You can't just barge in and arrest somebody because you heard an argument.'
  - Social workers might react by saying: 'We have no evidence, and the old man isn't one of our regular clients.'
  - On the other hand, the neighbours of the old man might insist: 'We have to be able to protect one of our own.'

However, when the teacher undertakes to make an even more radical change in the drama, the following might happen: The story moves several years forward in time, with the teacher-in-role as the little grandson from the story now grown into an adult. He is interviewing the pupils-in-role as workers who are applying for jobs in the factory that he owns, in which he designs and manufactures 'aids to independent living' for people who are elderly, disabled or infirm.

- The teacher (in role as the adult grandson) explains to the aspiring workers that the most important qualification for getting a job is an understanding of what older people may need to help them remain independent, and he offers to introduce them to an older person who is also one of the factory's clients.
- The teacher-in-role as the grandson is replaced by the teacher-in-role as the older person, who is faced with the challenges of failing sight, hearing impairment, restricted mobility, difficulties in getting out of a chair, having a bath, etc.
- The children use the information gathered in their interview with the older person to develop some ideas for a new line of products, which will assist in promoting independent living among older people.

Within this unit of drama work with teacher-in-role, the central strategies used include: meetings, interview, and writing/drawing in role. However, the teacher in this second instance has also:

- changed the teacher's role in the drama (twice); also changed the role of the pupils in the drama;
• shifted the context from simply applying for a job to actively developing new technologies to assist older people;
• altered the frame in the case of the teacher's role as the grandson to someone who is deeply committed to helping the elderly;
• altered the frame in the case of the teacher's role as the older informant to someone who wishes to remain as independent as possible for as long as possible;
• altered the frame in the case of the pupils' roles from people who need jobs to people who need to actively demonstrate empathy with the needs of older person in order to get those jobs.

From this brief example, we hope we have made clear that it is the shifts in context, role and frame, working together with a range of strategies and signs, which broaden and strengthen the drama experience for the pupils and so provide a richer and more rounded learning experience through a changing set of lenses.

If we examine this premise in greater detail, we can see these shifts offer a multiplicity of opportunities to explore the theme. Each of these principles can be Table 2.

**Table 2: Opportunities of context, role and frame shifts**

<table>
<thead>
<tr>
<th>Context</th>
<th>Role</th>
<th>Frame</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Context shifts</td>
<td>Role remains the same</td>
<td>Frame remains the same</td>
</tr>
<tr>
<td>2. Context remains the same</td>
<td>Role shifts</td>
<td>Frame remains the same</td>
</tr>
<tr>
<td>3. Context remains the same</td>
<td>Role remains the same</td>
<td>Frame shifts</td>
</tr>
<tr>
<td>4. Context shifts</td>
<td>Role shifts</td>
<td>Frame remains the same</td>
</tr>
<tr>
<td>5. Context shifts</td>
<td>Role remains the same</td>
<td>Frame shifts</td>
</tr>
<tr>
<td>6. Context remains the same</td>
<td>Role shifts</td>
<td>Frame shifts</td>
</tr>
<tr>
<td>7. Context shifts</td>
<td>Role shifts</td>
<td>Frame shifts</td>
</tr>
</tbody>
</table>

If we now apply these shifts to the original scenario suggested by the Grimm Brothers' story, the scenario shown in Table 3 might be created:

**Table 3: Changes to context, role and frame**

**Shifting:**

1. neighbours to a time before the events of the story might still find them with an opinion about the old man's family, which is something like: 'That couple wants locking up' - but for a different reason this time
2. neighbours to workmen in the neighbourhood who have the same point of view about the event but whose roles possess a different history, status and authority to take action
3. the neighbours' concern to whether they could be charged with creating a public nuisance should they be found to have falsely accused the family of cruelty
4. neighbourhood to newspaper office and neighbours to reporters who also believe 'that couple wants locking up'. Once again the new

5. situation to where neighbours are featured in newspapers, are not happy about the negative publicity they have received and are having doubts about getting further involved in matters
6. roles from neighbours to police officers who feel they cannot arrest someone on the basis of hearsay and who are worried about overstepping their authority
7. roles from neighbours to workers applying for jobs in a factory owned by the old man's grandson where they will design and manufacture 'aids to independent living' for older people
Changing the *context* will alter the where and when of the drama and provide opportunity to explore events prior to or subsequent to the main focus.

Changing the *roles* in the same context will change the who of the drama.

Changing the *frame* gives existing roles in the existing situation a different point of view and outlook on the circumstances of the drama.

Changing the *context and role* moves the learners to new roles in a new situation but maintaining a similar viewpoint on unfolding events.

Changing *context and frame* means existing roles produce a new response to the changing circumstances of the drama.

Changing *role and frame* puts new roles with a different point of view into the existing situation.

Changing *context, role and frame* produces an entirely new situation through which to continue exploration of the theme.
This seems relatively straightforward - which in one sense it is. However, we have consciously kept this example simple. In fact, a change in just one element will frequently evoke subtle changes in the others - not least because, if we revisit our earlier statement, it can be recalled that we have divided context into three elements: time, place and event, so making for further richness of choice. In addition, ‘role’ involves the role of the teacher as well as of the pupils and the teacher's frame may well be different from theirs, so providing yet further opportunities for shifts.

All these permutations add up to a very complex and sophisticated structure which may seem overwhelming but which we would argue is hugely exciting and liberating. Add to this the ways in which signs and strategies are brought to bear upon the creation of mood, focus and action, and we see the full richness of the spectrum of circumstance that teachers have at their disposal in engaging learners with process drama experiences - a spectrum in which the interplay between context, role and frame remains the essential, creative and empowering heart.
